**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-26, and 33-40, drawn to an audio processing method/apparatus for detecting number and directional designators of directional input channels, and the processing the channels according to a selectable process, classified in class 381, subclass 22, 18, and 97.
  - II. Claims 27-32 and 41-45, drawn to drawn to an audio processing method/apparatus for determining if an audio has been equalized, and applied a pre-selected gain below a threshold frequency, classified in class 381, subclass 103, 104, 107, and 98.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as can be used to determine the number and type channels are input and processing them according to provide surround sound channels. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
